SUMMARY

Python backend engineer with 3+ years of experience building production services, data pipelines and ML-powered tools. Former intern at Google (STEP) and Yandex. HSE graduate in machine learning with a strong foundation in algorithms and mathematics (international olympiad medals). Focused on readable, testable code, thoughtful API design and delivering reliable systems at scale.

SKILLS

Programming languages:	Python, SQL, Go
Core CS:	Algorithms & data structures, OOP, ETL
Backend:	FastAPI, Django, Streamlit, REST APIs, microservices
ML & Data:	Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, PyTorch, Keras, XGBoost, LangChain
Databases:	PostgreSQL
Tools:	Git, GitHub, GitLab, Docker, GCP, CI/CD, Jupyter
Languages:	English (B2), Russian (native), Belarusian (native), Spanish (A1)

WORK EXPERIENCE

Sber — Software Engineer (Python) Oct 2025 – Present | Minsk, Belarus

- Built an internal FastAPI + React service to automate audit workflows: orchestration and PostgreSQL-backed APIs.
- Deployed and integrated LLM models into production pipelines.
- Developed a server load forecasting service using time-series models.
- Built an automated data analysis tool FastAPI + React + LLM backends for hypothesis generation, correlation analysis and visualization over arbitrary datasets. *Technologies:* Python, LangChain, PostgreSQL, Docker, Git, Jira

Yandex — Software Engineering Intern (Python) Sep 2023 – Dec 2023 | Minsk, Belarus

- Contributed to load-testing infrastructure on the Yandex Tank team. *Technologies:* Python, Docker, CI/CD

OZON — Software Engineer (Python) Sep 2021 – Aug 2023 | Moscow, Russia

- Automated business projects, ETL.
- Designed and shipped Django microservices for ETL workflows; automated ClickHouse data ingestion, metric collection and web-based pipeline management.
- Built scheduled Teams and Telegram bots for data exports and stakeholder notifications from production databases.
- Developed and deployed a sales forecasting model across product categories, including feature engineering, model evaluation and production rollout.
- Performed code reviews. *Technologies:* ETL, SQL, Django, Pandas, PostgreSQL, Docker, CI/CD, Git

Tinkoff — Data Analyst Mar 2021 – Jul 2021 | Moscow, Russia

- Developed and tested CRM automation procedures; built a mobile app for field agents with meeting schedules and client details.
- Ran A/B experiments to validate product changes. *Technologies:* Python, SQL

Google — STEP Intern, Site Reliability Engineer Jun 2020 – Oct 2020 | Remote

- Built a **Terraform cost estimation tool** for GCP users, integrating the Cloud Billing API to retrieve pricing for VMs, disks and other cloud resources.
- github.com/sweethd0vee/terraform-cost-estimation *Technologies:* Go, GCP, Terraform, Git

SELECTED PROJECTS

Credit Scoring Web Application

2022

End-to-end ML pipeline on Home Credit Bank data: feature engineering; linear regression, gradient boosting, and neural network models; Django web application scoring loan applicants on 30 key features.

Concept Lattice Neural Networks (Research)

2023

Interpretable neural network architecture based on Formal Concept Analysis; implemented with PyTorch sparse layers.

EDUCATION

2018 – 2022 Higher School of Economics, Faculty of Computer Science, Bachelor's Degree (Moscow, Russia)

GPA 7.0/10

2016 – 2018 Lyceum of Belarusian State University (Minsk, Belarus)

GPA 9.0/10

AWARDS

2015 – 2018 Belarusian National Mathematical Olympiad — **Gold, Silver**

2016 – 2018 European Girls' Mathematical Olympiad (5th–7th place) — **Silver, Bronze, Bronze**

2017 – 2018 International Zhautykov Mathematical Olympiad — **Silver, Bronze**

2018 Romanian Masters in Mathematics — **Honorable Mention**
